This is a very common confusion. The key difference is:

- **.value** → gets or sets the value **typed by the user** in form elements (<input>, <textarea>, <select>).
- **.textContent** → gets or sets the **text inside an HTML element** like <p>, <h1>, , <button>, etc.

HTML Element	Use
<input>	.value ✅
<textarea>	.value ✅
<select>	.value ✅
<p>	.textContent ✅
<h1>	.textContent ✅
	.textContent ✅
	.textContent ✅
<button>	.textContent (button label) ✅
